Professional Summary

Software Engineer with 3 years building secure, distributed backend systems across fintech and healthcare domains, using Node.js, .NET Core, and Angular/React on PostgreSQL/SQL Server, Docker, and Kubernetes. Skilled in Domain-Driven Design, event-driven architecture, and message-driven systems (Kafka, RabbitMQ), with a track record of measurable performance and workflow improvements.

Technical Skills

Languages	**C#**, PHP, Javascript, Python, TypeScript
Frameworks & Libraries	**Node.js, Express**, **.NET**, CQRS/MediatR, Entity Framework, ReactJS, Angular, Laravel, Django
Database	PostgreSQL, SQL Server, MongoDB, MySQL
Cloud & DevOps	**Microsoft Azure**, **Docker**, **Kubernetes**, Docker Swarm, K3s, GitLab CI/CD, AWS
Messaging & Observability	**Kafka**, RabbitMQ, Zipkin, Serilog/NLog
Payment Integrations	Visa, TSYS, BlueSnap, SSLCommerz
Tools	**Git** , Redis, Websockets, SSE, Jira, Postman, Insomnia
Methodologies	Agile(Scrum), Code Review, Unit Testing

Work Experience

Adaptive Enterprise Ltd *Software Engineer* Dec 2025 - Present

- Designed and built core microservices (Prescription, Appointment, Telemedicine) using .NET 8, Clean Architecture, and CQRS/MediatR, backed by PostgreSQL/EF Core.
- Designed the appointment booking domain with a slot-hold lifecycle supporting multiple convergent release mechanisms, and resolved race conditions in concurrent booking flows with real-time updates via WebSockets/SSE.
- Integrated SSLCommerz for payments with platform-aware redirects, and implemented per-participant Agora token minting for secure telemedicine video sessions.
- Deployed services on Docker Swarm/K3s with GitLab CI/CD, and operated the platform's distributed messaging infrastructure (Kafka, RabbitMQ) with Zipkin tracing, including diagnosing a critical disk-space incident traced to Kafka's storage volume.

Teton Private Ltd *Software Engineer I* Sep 2023 - Nov 2025

- Built secure, high-throughput ASP.NET Core Web APIs on Microsoft SQL Server for ConnexPay, a mission-critical fintech platform, aligned with PCI-DSS standards and robust exception handling.
- Integrated third-party payment gateways including Visa, TSYS, and BlueSnap, implementing webhook/IPN handling, transaction validation, and ledger updates.
- Applied Domain-Driven Design and layered service abstractions with Repository and Unit of Work patterns, optimizing query performance and helping modularize the monolith toward a microservices-ready architecture.
- Automated the client onboarding workflow by redesigning backend processes and database schema, cutting setup time by 30%.
- Built Node.js/Express backend services and REST APIs for in-house MERN-stack applications, applying event-driven, asynchronous design patterns for concurrent, I/O-heavy workloads.

Projects

The Algomist - DSA Journey (View) - React, TypeScript, TailwindCss

- Developed a personal DSA preparation tool focused on organizing data structures and algorithms practice into a structured learning routine.
- Features include AI-generated topic breakdowns (via Grok AI), difficulty progression, and progress tracking.

mypaw - Pet Healthcare Platform - .NET 8, Angular, PostgreSQL, pgvector, Docker, Kubernetes

- Architected a modular monolith pet healthcare platform with .NET 8 and Angular, using PostgreSQL with pgvector for semantic search.
- Migrated the monorepo from Docker Compose to Kubernetes, adding CI/CD pipelines and observability with Serilog, Prometheus, and Grafana.
- Built a Retrieval-Augmented Generation (RAG) triage module combining Ollama embeddings and the Gemini API for symptom-based recommendations.

SNOMED CT Clinical Search API - .NET Core, EF Core, PostgreSQL

- Built a clinical terminology search API exposing lexical and semantic autocomplete endpoints over the SNOMED CT dataset.
- Designed a denormalized search table with generated `tsvector` columns and word-similarity matching for fast, accurate lexical search.
- Delivered sub-second semantic concept lookup using pgvector embeddings alongside the lexical search path.

Education

B.Sc.(Engg.)	Computer Science & Engineering, MBSTU *Research Project: Innovative E-Commerce Hub with Auction-Centric Dynamics*	(2017-2021)
H.S.C.	Trust College, Dhaka | G.P.A: 5.00	(2015)

Languages & Certifications

Languages	Bengali (Native), English (Proficient - IELTS 7.5)
Certifications	Foundational C# with Microsoft **(freeCodeCamp)**; Microsoft Azure for .NET Developers - Cloud Patterns and Architecture **(Pluralsight)**
